1. Inicializa un nuevo repositorio Git en una carpeta llamada "labowebs" y agrega los archivos proporcionados en el aula virtual. Renombra la rama master a main, si es necesario. Realiza el primer commit. Muestra el log del repositorio.

```
git init
git branch -m master main
git add .
git commit -m "Primer commit"

Trabajo en Remoto

1. Continúa con el repositorio labowebs. Añade el repositorio a Sourcetree.

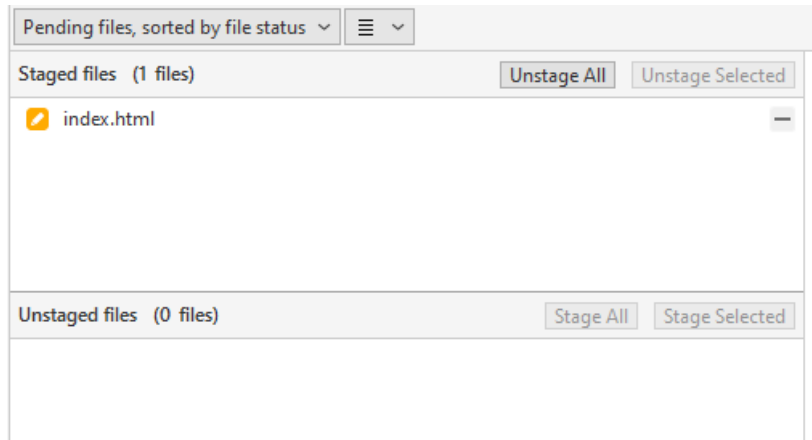

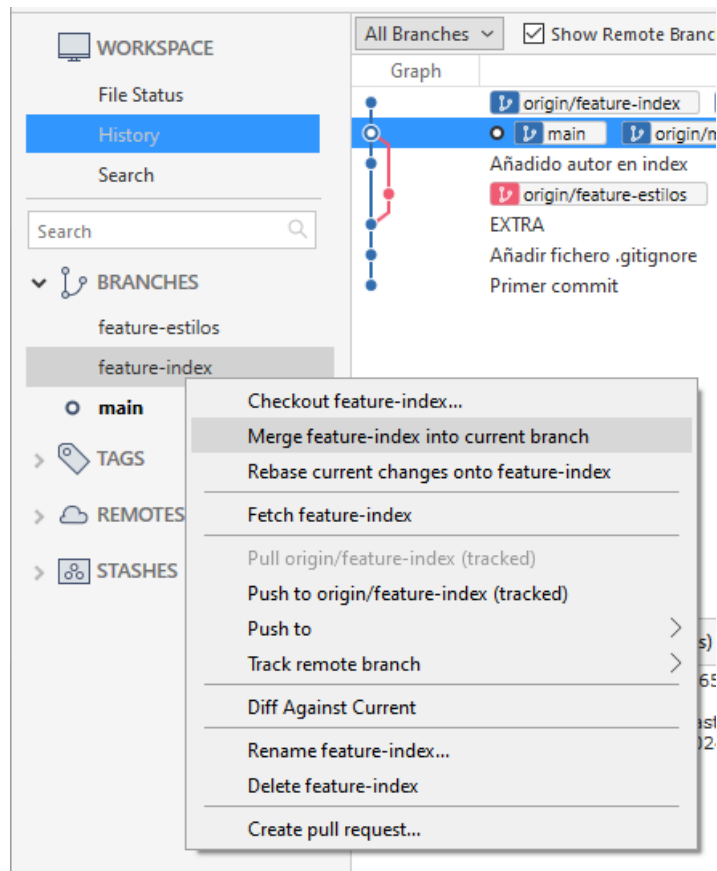

2. Crea un repositorio remoto y sube al remoto los ficheros de tu repositorio local. Debes subir todas las ramas.

```
git remote add origin https://github.com/ydr29913/trabajoLabowebs.git
git branch -M main
git push -u origin main
git push -u origin feature-estilos
```

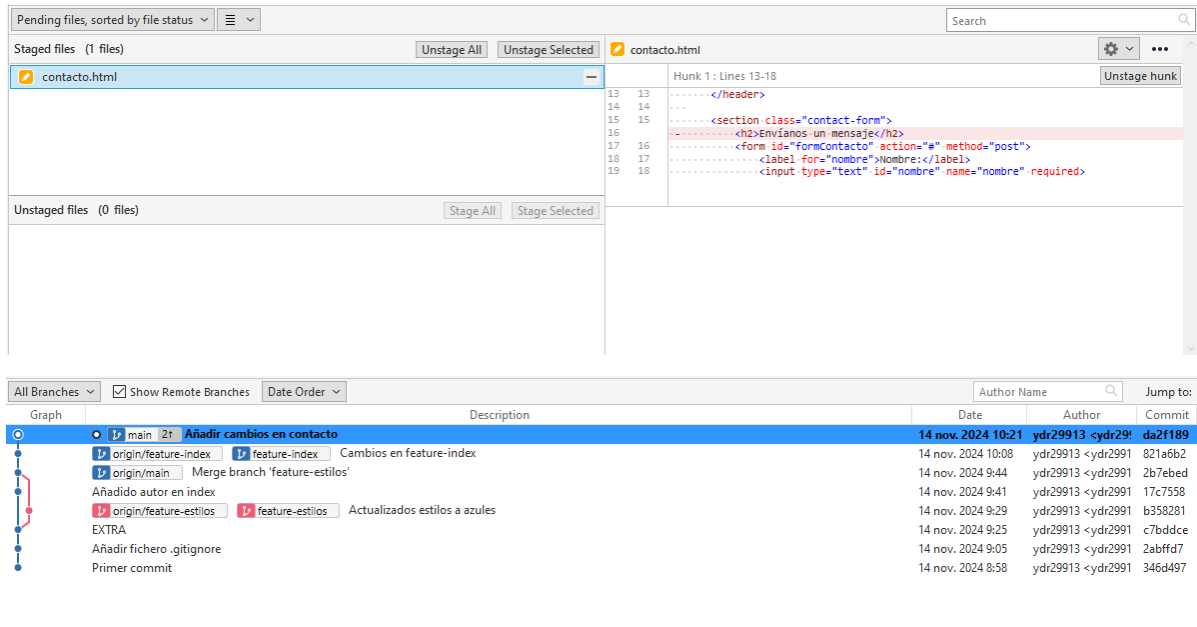

3. Crea una rama feature-index. Añade el siguiente código dentro de la "<section class = 'about'>". Añade los cambios y crea un commit. Sube los cambios al remoto.

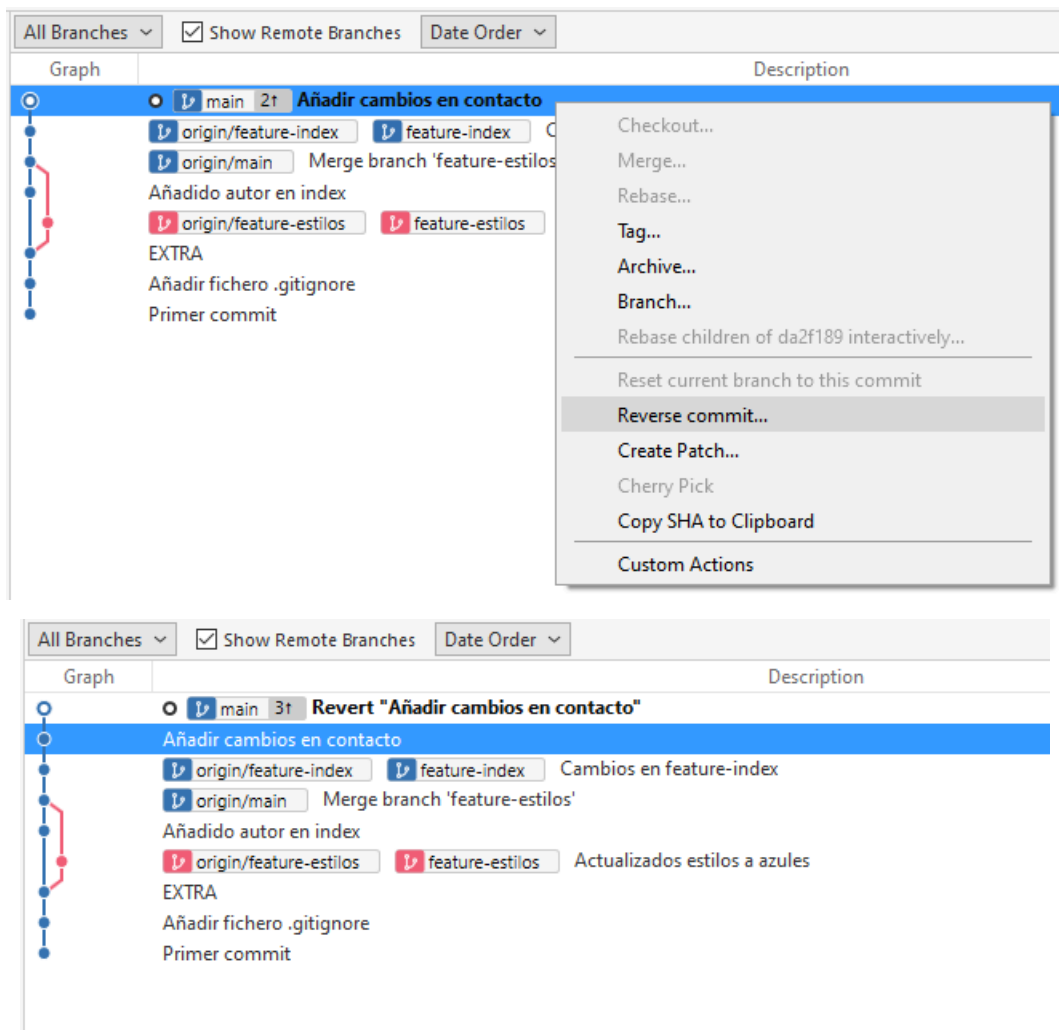

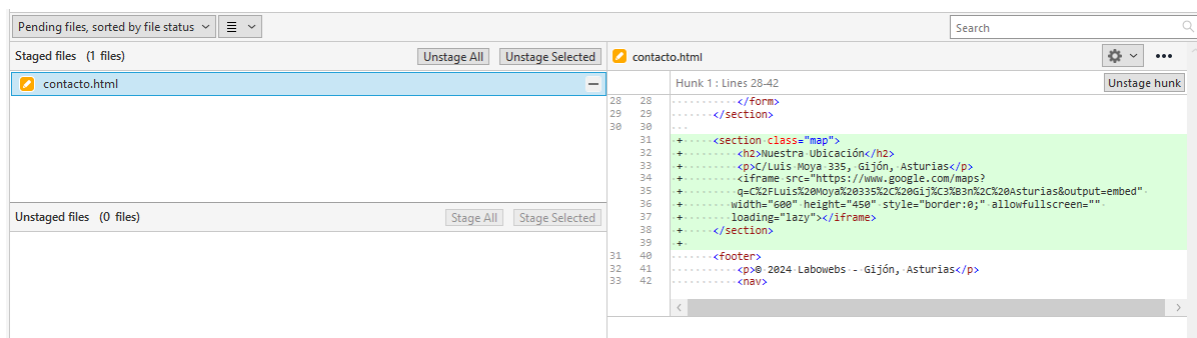

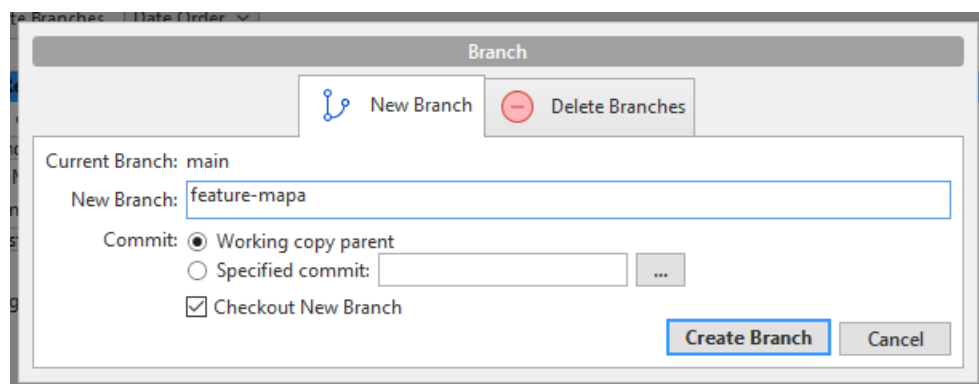

5. Edita el fichero **contacto.html**. Borra unas líneas. Muestra los ficheros con cambios pendientes y las diferencias. Añade los cambios y haz un commit.

6. Te das cuenta del error. Deshaz el commit anterior. Captura el estado actual del repositorio.

7. Crea una rama **feature-mapa** . Incluye este código en el archivo **contacto.html**. Añade los cambios. Realiza un commit. Sube los cambios al remoto. Muestra en el remoto los cambios del archivo **contacto.html** en la rama **feature-mapa**.

2. Vuelve a la rama `main`. En el fichero `script.js` en las mismas líneas que en la cuestión anterior, añade el código siguiente. Confirma el cambio y haz un commit.

3. Fusiona la rama `hotfix-js` en `main`. Debe producirse un conflicto. Resuélvelo. Cuando termines la resolución del conflicto sube los cambios al remoto.
